## PROFESSIONAL SUMMARY

Final-year Computer Science undergraduate with a dual focus on Full-Stack Web Development (MERN, Laravel) and Deep Learning. Experienced in building scalable web applications with secure role-based architectures and researching Computer Vision models for industrial automation. Proven ability to implement complex neural networks (CNNs, Autoencoders) using TensorFlow and PyTorch.

## EDUCATION

### BRAC University

Bachelor of Science in Computer Science

Dhaka, Bangladesh

Expected Graduation: April 2026

**Key Courses:** Artificial Intelligence, Deep Learning, Machine Learning, Web Technologies, Software Engineering, Algorithms, Database Systems.

## TECHNICAL SKILLS

- **Languages:** Python, JavaScript (ES6+), PHP, C++, Java, SQL.
- **AI & Machine Learning:** TensorFlow, PyTorch, OpenCV, Keras, CNNs, Autoencoders, Scikit-Learn.
- **Web Frameworks:** React.js, Node.js, Express.js, Laravel (PHP), Redux.
- **Databases & Tools:** MongoDB, MySQL, Git/GitHub, Linux, VS Code, Postman.

## Academic Research

### Automated Visual Inspection for Industrial Environments

Ongoing Thesis

Tools: Python, TensorFlow/PyTorch, OpenCV

- Developing deep learning models (CNNs) to automate defect detection in manufacturing.
- Focusing on real-time object detection and anomaly identification for quality control.

## Key Projects

### CNN-based Variational Autoencoder on MNIST

Deep Learning

Technologies: Python, PyTorch, Neural Networks

- Implemented a comparative analysis of Stochastic Variational Autoencoders (VAE) vs. Deterministic Autoencoders.
- Designed custom CNN architectures to encode/decode handwritten digits and Visualized latent space representations to evaluate generative performance.

### Job Marketplace Platform

Full Stack Web

Technologies: MongoDB, Express, React, Node.js (MERN)

- Built a service-based platform connecting clients with professionals (tutors, technicians).
- Integrated real-time chat and secure payment features for seamless user interaction.

### University Club Management System

Web Application

Technologies: PHP, Laravel, MySQL

- Developed a role-based system for managing Admins, Officials, and Clubs.
- Created automated venue booking logic to prevent event scheduling conflicts with chatting option .
